

2022
TACTICAL

A man in military-style gear, including a dark cap with "ARMY" written on it, sunglasses, and a tactical vest, is holding a black shotgun. He is standing in a large, industrial-looking building with many windows. The lighting is dramatic, with strong shadows and highlights.

WHAT DOES IT TAKE TO MAKE IT A HUGLU?

Of course our traditions. We are open for innovations and improvement, on the other hand, we always have respect for experience based on craftsmanship.

Our vision of accident free shot ensures that our priority is safety. Safety is a big promise.

We subject all our shotguns made of first class steel to safety tests in order to keep our promise.

We have great targets; however, we are aware of the fact that achieving these targets require paying attention to minor details.

BOLT ACTION

'Ovis' is named after the ancestor of domestic sheep existing in the Anatolia. Carefully engraving every single detail just like a work of art, Ovis offers all experience and competence acquired by Huğlu over the years. Also featuring to be the first mass production bolt action rifle of the Cooperative, Ovis is available for preference of all hunters enjoying long distances thanks to its 308 calibre, single button control, 71 cm steel barrel, 3+1 cartridge clip etc.

PUMP ACTION

Ergonomic designs which are meant for perfect shooting experience.

For efficient grouping, sturdy and lightweight frame is accompanied by a barrel which is made of Italian steel. All these components come together in Huglu's semi automatic shotguns. Our experience of one century is presented for your enjoyment through semi automatic product range of ours.

ATROX

Ejection system works with a spring to eject blank cartridges even with slow pulling the pump back

Adjustable Ghost Rear Sight to customize your sighting

Picatinny Rail for mounting different shooting accessories

Heat Shield to protect shooter hands from the heat of the barrel.

Wing Protected Front Sight

Muzzle Brake

Safety is much more important than anything in a lifetime... Immobilizing system on the firing pins will make shooters feel themselves in safe during shooting

Cross-bolt safety behind trigger

Processed from 6013 aluminium for a longer usage time without any deformation.

PISTOL GRIP STOCK

To make a safe shooting with a pump action shotgun, the breech bolt must lock perfectly and action bar must slot into its place faultlessly.

If you are shooting in a jungle or a muddy/dirty environment, any dust or dirt may block the mechanism to be locked or the action bar to be slotted into its place. Thus, because of the high pressure that develops when shooting, the mechanism crashes to the back of the receiver and the gun may explode while shooting. So the shooter might get seriously injured.

Immobilizer system we improved prevents the firing pin to be hit by the hammer when the gun is in the mentioned conditions above. Hence, the gun doesn't fire and the shooter doesn't get injured due to this exploding.
